Claim R jections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buckley et al 6106121 in view of ul Azam 5566224, Greanais et al 5149919, Redmayne 5650597 and Jackson et al 4931782.

Buckley Jr has the LCD within the rear view mirror, Azam the touch screen on the mirror. Touch screens were well known for the benefit of intuitive use. Therefore, it t would have been obvious to one of ordinary skill with the device of Buckley Jr, to employ the touch screen as ul Azam for ease of use. LCDs were well known for low power consumption, low cost (small size –low end LCDs) and the ability to make transparent, and therefore it would have been obvious to one of ordinary skill with the de device of ul Azam to employ an LCD for the above listed reasons.

Still lacking from the disclosure is the electrode for touch sensing. Conventional touch screens such sensing electrodes (see last 3 references for evidence of this assertion). Therefore it would have been obvious to one of ordinary skill to use a touch sensor with electrodes as claimed for the well known and conventional nature and associated well established supply chain and low cost.

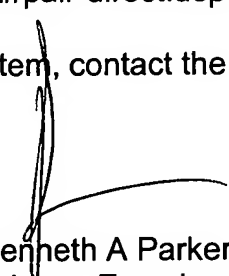

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
